Education

National Institute of Technology, Durgapur

Dec 2021 – Jun 2025

Bachelor of Technology in Electronics and Communication Engineering

Skills

Languages: Python, C++, JavaScript, TypeScript, SQL

Backend: FastAPI, Node.js, Express.js, REST APIs, Microservices

Databases: PostgreSQL, MongoDB, MySQL, Oracle

Cloud & DevOps: Docker, Kubernetes, Terraform, GCP, Git, CI/CD

Messaging: Kafka

Work Experience

Amdocs

Jul 2025 – Present

Software Developer

- Designed and deployed production-ready **multi-agent AI workflows** using **LangChain** and **LangGraph**, orchestrating stateful tasks that **reduced manual business process handling by 35%**.
- Integrated cloud-native monitoring via **Langfuse** to trace execution paths across high-volume data streams and optimized prompt costs, **reducing API token expenditure by 25%**.
- Architected heterogeneous data pipelines (Oracle to PostgreSQL) and batch-oriented ETL workflows in **Python** to manage over **5M+ data points daily** under strict SLA limits.
- Engineered high-throughput **Kafka** and **FastAPI** event-driven data processing services capable of **sub-second latency** for real-time status synchronization across multi-tier enterprise systems.
- Managed **Kubernetes deployments** using modular **Terraform** templates and **Helm** charts, establishing auto-scaling policies that maintained **99.9% service availability**.
- Platformized complex operational components into reusable internal **Python libraries**, minimizing technical debt and accelerating cross-team feature delivery by **40%**.

Landmark Group – Logistiq

Dec 2024 – Apr 2025

Full Stack Developer Intern

- Developed and deployed production **React.js** features and optimized frontend architecture, reducing code complexity by **30%** and improving page load performance by **25%**.
- Developed reusable backend utilities and API abstractions, simplifying complex database interactions and advanced multi-tier search functionality.

Projects

Not Paytm — Production Full-Stack Digital Wallet Platform *React, TypeScript, Node.js, Express.js, MongoDB, Socket.IO*

- Built a production-ready peer-to-peer digital wallet application with secure authentication using **JWT access/refresh tokens**, email verification, password reset (Resend), and Remember Me functionality.
- Designed **atomic fund transfers** using MongoDB transactions, maintaining a complete transaction ledger with receipts, filtering, and ownership validation to prevent race conditions.
- Implemented **real-time transfer notifications** using Socket.IO with per-user rooms, live notification feeds, and toast alerts for instant transaction updates.
- Developed an **admin dashboard** for user management, transaction monitoring, analytics, and role-based authorization using middleware.
- Migrated the application to **strict TypeScript**, introducing Zod validation, service-layer architecture, reusable APIs, and improved maintainability.
- Containerized and deployed the application using **Docker**, **Render**, **MongoDB Atlas**, and **Vercel** with production environment configuration and CI/CD.
- Live Demo:** <https://not-paytm.vercel.app>

Achievements

- Google Cloud Associate Cloud Engineer (ACE)** Certified [[Credential Link](#)].
- Secured **Global Rank 2090** in **Meta Hacker Cup 2024** Round 1.
- Codeforces Specialist** (Maximum Rating: **1468**) [[Profile Link](#)].
